Year 2009 Traffic Count Report

May 2010

Preparation of this report has been financed in part through grants from the U.S. Department of Transportation, Federal Highway Administration, and in accordance with the Broward MPO UPWP Task 2.1.

Broward Metropolitan Planning Organization, 115 S. Andrews Avenue, Room 329H, Ft. Lauderdale, FL 33301

**BROWARD COUNTY
YEAR 2009
TRAFFIC COUNT REPORT**

INTRODUCTION

This report is prepared each year to provide traffic information on major roadways in Broward County. Traffic counts are collected quarterly by both the Florida Department of Transportation (FDOT) and the Broward County Traffic Engineering Division (BCTED) at designated traffic count locations.

For analytical and historical purposes, every attempt is made to count the same locations each year. Additional stations are added as new roadways are constructed. The Florida Department of Transportation maintains a list of count locations along State highways. Prior to the start of a new calendar year, Broward MPO staff reviews the count locations covered by FDOT and prepares a list of count locations for the remainder of major roadways in Broward County. The list is sent to the Broward County Traffic Engineering Division for data collection. At the end of each calendar year, Broward MPO staff prepares summary tables and maps to publish the traffic count data collected by both FDOT and BCTED.

This 2009 traffic count report and maps are available to the public through the Broward MPO as well as the Broward MPO WEB site at <http://www.broward.org/mpo/trafficcounts.htm>. Historical traffic counts from 1980 to 2008 are available upon request.

TRAFFIC COUNT DATA

Traffic counts are collected over a 24-hour weekday period, usually Monday through Thursday. However, to keep the program on schedule, a count may be collected on a Friday in a week during which there is a holiday.

- The Florida Department of Transportation collects traffic counts once at each count location during the months of March, April, May and June in 2009. The Broward County Traffic Engineering Division collects the field data year round; depending on the available resources, traffic counts are collected twice every other year at each count location.
- In most cases, traffic counts are collected near intersections. For accurate recording of the traffic, traffic counters are placed several hundred feet away from an intersection. Depends on the type of roadway, traffic counts are recorded either as separate two-directional counts, combined two-directional counts, or one-directional counts for one-way streets. For separate two-directional counts, traffic volumes are displayed as northbound and southbound (NB/SB) or eastbound and westbound (EB/WB). For combined

two-directional counts, traffic volumes are displayed as north/south (NS) or east/west (EW). For one-directional counts, traffic volumes are displayed as northbound (NB), southbound (SB), eastbound (EB), or westbound (WB).

➤ Axe Correction Factor:

Traffic counters frequently use rubber road tubes to sense and record the number of axles at a count location. The Florida Department of Transportation develops axle correction factors to adjust-axle counts into vehicle counts. Axle correction factors are developed from classification counts by dividing the total number of vehicles counted by half the number of axles on these vehicles. Axle correction categories are developed for each highway section so factors can be applied to count locations where classification counts are not available. The 2009 axel correction factors are listed in pages 73 to 77.

➤ Seasonal Factor:

Due to the seasonal variability, traffic counts collected throughout the year are adjusted to Annual Average Daily Traffic (AADT) using weekly seasonal factors. Each year, the Florida Department of Transportation develops weekly seasonal factors based on data collected at continuous traffic count stations. To develop these factors, the County was divided into three zones: East, SR A1A to US 1; Central, US 1 to SR 7; and West, West of SR 7. In addition, seasonal factors were also developed for I-95, I-75, and I-595. See pages 78 and 79 for the 2009 Weekly Volume (seasonal) Factor Category Report.

➤ Peak Hour Traffic Volumes:

Beginning in year 2001, peak hour traffic information was added to this report. The yearly peak hour traffic is estimated using the AADT multiplied by the K₁₀₀ factor taken from the FDOT's AADT report.

TRAFFIC COUNT REPORT

This traffic count report contains the following tables:

- The quarterly 24 hour traffic volume table (AADT) - pages 1 - 35;
- The peak hour traffic volume table - pages 37 - 71;
- The 2009 Axle Correction Factor Category Report by FDOT – pages 73 - 77; and
- The 2009 Seasonal Factor Category Report by FDOT - pages 78 - 79.

The traffic volume tables include station ID, station location description, the traffic direction, the dates the counts were recorded, the quarterly counts, and the yearly average. In general, those counts recorded by the Florida Department of Transportation have a station ID number less than 7000. Those recorded by the Broward County Traffic Engineering Division have station numbers greater than 7000. The stations are listed in the tables in numerical order.

TRAFFIC COUNT MAPS (not included in this report)

The traffic volumes of vehicles per day (vpd) are displayed on maps along the roadway on which the counts were taken. Each count location on the map provides three pieces of information:

- A closed circle (●) represents a station count provided by the Broward County Traffic Engineering Division, and an open circle (○) represents data collected by the Florida Department of Transportation;
- Next to each circle is the station location number or ID number in black;
- Above or below the station ID number is the traffic count in red. For AADT, traffic counts are shown in thousands, rounded to the nearest tenth. A reading of N/A on the map indicates that traffic count was not collected during the calendar year. A reading of RUC on the map indicates that traffic count could not be collected for the station due to construction.

TRAFFIC COUNT REQUESTS

This traffic count report and maps are available to the public through the Broward MPO as well as the Broward MPO WEB site at <http://www.broward.org/mpo/trafficcounts.htm> . Any questions regarding the information found in the report or on the traffic count maps should be directed to:
